## AI-Powered Insider Risk Management and User Activity Monitoring

Veriato offers predictive behavior intelligence built with AI to help organizations manage insider risk and monitor employee activity in their remote, hybrid and in-office environments.

### Insider Risk Management (IRM)

GenAI powered predictive behavior analytics.

Risk scoring & anomaly detection.

Comprehensive language and sentiment analysis.

Automatic PII/PHI identification with RAG pre-trained models..

Minimize false positives and reduce alert fatigue.

### User Activity Monitoring (UAM)

User activity monitoring across more than 60 data points, including websites, applications, email, documents and more.

Capture and store keystrokes and screenshots.

Productive and idle device time tracking and scoring.

Real-time alerts for suspicious or unproductive activity.

**Used and Loved by Thousands of Customers In Over 35 Countries**

# Insider Risk Management (IRM)

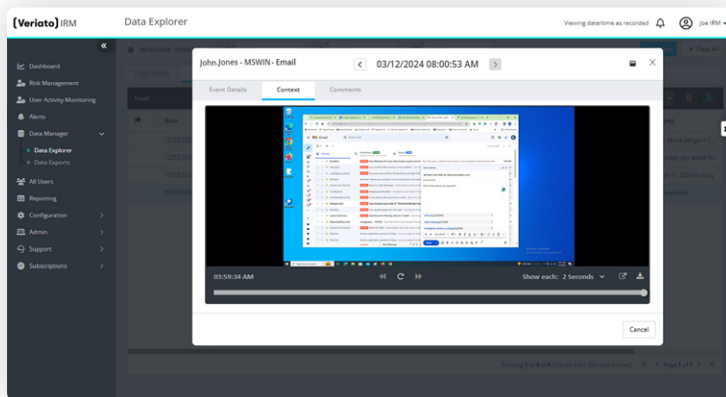

Predict and prevent insider cybersecurity threats with proactive insider risk management solution from Veriato. Get ahead of threats by harnessing the power of generative AI to analyze employee behavior, understand tone and sentiment and detection anomalous activity. Prevent risks from turning into threats and reduce alert fatigue.

-  Continuously monitor and record user behavior across devices.
-  Automatically compile risk factors and anomalies into a risk score for each user.
-  Respond to data breaches faster with extensive reporting, alerts and screenshots.

# User Activity Monitoring (UAM)

Gain complete visibility into your employees' device activity with Veriato UAM. Veriato UAM continuously collects endpoint data across more than 60 activities and then analyzes it to help monitor for early signs of cybersecurity risk, low productivity, lack of compliance or to run workplace investigations.

-  Log every action by every user and use the Data Explorer to review suspicious or unauthorized activity.
-  Easily see your most productive and least productive employees.
-  Set up real-time alerts and activity reports to quickly notify you of suspicious activity.

**Veriato** has reinvented the category it created, using AI based user behaviour analytics to help companies prevent risks and increase productivity in their remote, hybrid and in-office environments. Veriato's platform offers solutions for Insider Risk Management (IRM), behavioural analytics (UEBA), user activity monitoring (UAM) and data loss prevention (DLP) in a single powerful platform. Veriato delivers monitoring, alerts, reporting and screenshots, allowing customers to be predictive and proactive rather than reactive, critical in cybersecurity. The platform helps global Enterprises, SMBs and Government entities become more engaged, productive and safe.
